EDUCATION

Dalian University of Technology

Dalian, China

B.S. in Big Data Management and Application | **GPA: 3.69/4.0 (Rank: 5/59)** Sep. 2024 – Jun. 2028 (*Expected*)

- **Selected Coursework:** Probability and Mathematical Statistics (96), Professional Introduction to Big Data (96), Calculus (93), Introduction to Artificial Intelligence (90), Data Structures and Algorithms (94)
- **English:** CET-4 546

RESEARCH INTERESTS

VLM-based 3D world understanding, world models, vision-language-action models, and embodied intelligence.

RESEARCH EXPERIENCE

Tsinghua University Collaborative Research Project

Beijing, China

Research Intern

- Contributed to *GameVerse: Can Vision-Language Models Learn from Video-based Reflection?*, a benchmark project studying whether vision-language models can improve through video-based reflection in dynamic game environments.
- Led the main evaluation and ablation studies for Qwen3-VL-8B, Qwen3-VL-32B, GPT-4o-mini, and GPT-4o under different reflection settings, and organized experimental results and tables.
- Co-authored the paper manuscript and helped analyze model capability boundaries in perception, reasoning, action execution, and post-failure reflection.

SJTU APEX Lab

Remote / Shanghai, China

Research Intern

- Worked on personalized review generation over large-scale e-commerce datasets, focusing on recommendation-side item filtering and user-specific context construction.
- Investigated candidate architectures for a deep research agent and supported architecture selection.
- Assisted in building an RL-based optimization framework to support training and experimentation for personalized generation.

Dalian University of Technology

Dalian, China

Undergraduate Research Assistant

- Participated in a multi-agent image generation project based on the ComfyMind framework, focusing on intent parsing, evaluation, and feedback planning.
- Designed an iterative refinement loop to improve alignment between complex user instructions and generated outputs.

TECHNICAL SKILLS

Languages: Python, C++, Java, SQL

AI & Frameworks: PyTorch, CLIP, Qwen, LLM/VLM Evaluation, Benchmarking, Prompt Engineering

Tools: Git, Docker, Linux, VS Code

HONORS & AWARDS

2025: Third Prize, Northeast China Mathematical Contest in Modeling; Third Prize, RoboCup Advanced Vision 3D Detection Competition
